

(6)

$$E_n = \left(n + \frac{1}{2}\right) \hbar \omega$$

$$\Delta = \hbar \omega$$

Kuantize

diferensia ini dapat 2 bilangan untuk semua angka

$$\left(\frac{2\pi}{\omega} \cdot A\right) \rightarrow \frac{2\pi}{\omega} \cdot (\hbar \omega) = \cancel{2\pi} \frac{\hbar}{\cancel{2\pi}} = \hbar$$

egress batasi betasan diem epariva!!

$$E \gg \Delta \gg \hbar \omega$$

egress kopure

$$\Delta \text{ egress faturan} \approx \frac{\Delta}{\hbar \omega}$$

→ \hbar

$$\boxed{\omega_0 = \hbar} \xrightarrow{N} \text{quanta } N \text{ bodep.}$$
